Patent Details:

Patent	Kind	Lan	Pg	Filing Notes	Application	Patent
JP 6261765	A		19			

Abstract (Basic): JP 6261765 A

A new DNA encodes the amino acid sequence of 253 residues and has a DNA sequence of 760 bp 130 CZ sequences are given in the specification. Also claimed is a recombinant plasmid containing the DNA sequence, and it is pref plasmid pU8C.

USE/ADVANTAGE - By cloning mycinamicin III-O-methyl-transferase gene on vector plasmid, and by using the cloning vector system, the gene can be introduced to mycinamicin producible microbe. The gene introduced strain increases mycinamicin producing titre by elevating the enzymatic activity.
